Abstract

One or two sentences providing a **basic introduction** to the field, comprehensible to a scientist in any discipline.

Two to three sentences of **more detailed background**, comprehensible to scientists in related disciplines.

One sentence *clearly* stating the **general problem** being addressed by this particular study.

One sentence summarizing the main result (with the words "**here we show**" or their equivalent).

Two or three sentences explaining what the **main result** reveals in direct comparison to what was thought to be the case previously, or how the main result adds to previous knowledge.

One or two sentences to put the results into a more **general context**.

Two or three sentences to provide a **broader perspective**, readily comprehensible to a scientist in any discipline.

1 Introduction

This is just some basic markdown formatting, nothing special.

Just mention papers with their citation key, like so (Schnepf, Friedrich, Hepting, Meyen, & Franz, 2022). Use square brackets whenever you want the reference in parentheses (e.g., even when you want to add something else in the parentheses, Schnepf et al., 2022). Without the parentheses, formatting also works, as can be seen in Schnepf et al. (2022). **Note:** This is based on the `style/apa-style.csl` citation style file, you can find matching files for your usage on the web.

There is some more stuff mentioned in section 1.1

1.1 Sub-headings work, too

For images, I recommend falling back to Tex. This might look as follows (Fig. 1). Using `width=\textwidth`, you get an image using the full textwidth of the page. Adapt this by adding a scale, for example to fit two images next to each other: `width=.5\textwidth`. Photo by Robert Pügner.

Figure 1: Example image. Everything before the first period will be automatically used as the labelk for this image in the list of figures.

Of course, any Latex stuff works, so you can add mathematical formulas as well (e.g., $\alpha = .05$)[1].

---
